

Understanding
logo file formats

.SVG

Scalable Vector Graphic

The editable source file and a true vector format that allows infinite resizing without quality loss. This format functions virtually the same as an Adobe Illustrator (.AI) file, the only difference being that the .AI format is a proprietary trademark of Adobe which can only be utilized by Adobe software. The .SVG format can be used universally with any vector graphics software, including Illustrator, Inkscape, and CorelDraw.

.EPS

Encapsulated Post Script

Another editable source file which can be opened with any vector graphics software, as well as raster graphics applications like Photoshop and GIMP. This file is not a true vector format though, so using the .SVG file for editing is recommended. The .EPS format is best utilized in video editing when adding a logo to a video.

.PDF

Portable Document Format

Another editable source file which functions similarly to the .SVG. Much like the .SVG format, this file can be opened and edited with any vector graphics application.

.PNG

Portable Network Graphics

A lossless raster format that supports alpha channels, allowing your logo to have a transparent background. This file is best when utilized on anything with a digital display, like websites, social media, and mobile apps. The transparent background means your logo will lay nicely on top of whatever background you place it on.

.JPG/.JPEG

Joint Photographic Experts Group

This file is similar to .PNG in that it is a raster format, however it does not support alpha channels so your logo will not have a transparent background. The advantage a .JPG file offers is that it tends to be more compressed than a .PNG, meaning a smaller file size. We mainly include it because some vendors and partners only accept .JPG files when they request your logo.

Support

If you find you need a file type or size that we have not included, or discover any issues with the logo files we've provided, please reach out and we will do our best to help.

Take care,
Brian & Valerie
